

# Product Data Sheet

## Connecting Clip

A connecting clip is a hardware which is used in false ceiling installation technique to connect the ceiling section to the intermediate channel. The standard dimension of the clips are 2.64 Ø. It is extremely useful to keep the framing system fixed at one position.

Product Description	Steel grade	Dimension	Weight per Nos
Connecting Clip	High carbon steel	2.64 Ø	10g (Approx)

## Features

- Durable
- High tensile strength
- Robust and detailed design
- Keeps framing system sturdy
- Quick, simple & time efficient

## Installation Guidelines

- The connecting clips are used at the intersection of two channels.
- The intersection takes place where the ceiling section and intermediate channel meets.
- The intermediate channel is always mounted above the ceiling section.
- The connecting clip is then attached to the ceiling section and pushed into place as per requirement.
